

IN THE SPECIFICATION:

The specification as amended below with replacement paragraphs shows added text with underlining and deleted text with ~~striketrough~~.

Please REPLACE the paragraph [0019] with the following paragraph:

[0019] These and/or other aspects and advantages of the invention will become apparent and more readily appreciated from the following description of the preferred embodiments, taken in conjunction with the accompanying drawings in which:

FIG. 1 is a perspective view of a monitor according to the present invention;

FIG. 2 is a partially exploded perspective view of the monitor of FIG. 1;

FIGS. 3A through 3D are sectional views illustrating that a locking hook is locked to a locking part of FIG. 2;

FIG. 4 is a sectional view illustrating the locking hook locked to the locking part of FIG. 2 in the state that the monitor main body is separated from the monitor;

FIG. 5 is a sectional view illustrating the locking hook locked to the locking part of FIG. 2 in the state that the monitor main body leans to one side; ~~and~~

FIG. 6 is a partially exploded perspective view of the monitor of FIG. 1, showing a spring member; and

FIG. 7 is a is a view illustrating how a spiral spring connects to and interoperates with a guiding bracket, guiding shaft, and a moving block.

Please REPLACE the paragraph [0025] with the following paragraph:

[0025] The spring member is preferably a spiral spring 90. As shown in FIG. 6, the spiral spring 90 has a first end 93 spirally wound on a guiding shaft 91 and coupled to a guiding bracket 95, and a second end 94 coupled to the moving block 60. Here, the guiding bracket 95 is preferably combined to an upper part of the stand member 30. In other words, the first end of the spiral spring 90 is coupled to the upper side of the stand 30, and the second end of the spiral spring 90 is coupled to the moving block 60, which is coupled to the moving member 40.
